

Siviour Landowner Accord

- **Renascor has entered into an agreement with the owners of the property that hosts the Siviour Graphite Project**
- **The agreement ensures that Renascor will continue to enjoy access rights to undertake drilling, collect bulk sample material and carry out other work programs related to Siviour's development**
- **The agreement further provides Renascor with the right to purchase the land that hosts the Siviour deposit**
- **Renascor is currently undertaking a Definitive Feasibility Study on Siviour, with upcoming work programs expected to include reserve definition drilling, variability and other metallurgical testing and detailed engineering**

Renascor Resources (ASX: RNU) is pleased to announce that it has entered into an agreement with the Siviour family, the owners of the property that hosts the Siviour Graphite Deposit, to facilitate the development of the Siviour Graphite Resource.

The agreement ensures that Renascor will continue to enjoy access rights to the project area for drilling, collecting bulk samples and carrying out other programs related to work Renascor is currently undertaking in furtherance of the Siviour Definitive Feasibility Study.

The agreement further grants Renascor the right to acquire an option to purchase the land, with the price to be set following an independent appraisal next year.

As part of the agreement, Dean Siviour has accepted an appointment to an advisory board Renascor has established to assist in the sustainable development of the Siviour Graphite Project.

Renascor Resources' Managing Director, David Christensen, hailed today's Agreement as an example of co-operation between landowners and mineral developers, stating:

"The agreement announced today delivers viable outcomes for both the Siviour family and for Renascor. Significant new opportunities may now be possible for residents of the district and beyond. We look forward to continuing to work with the Siviour family as we develop the world class Siviour Graphite Project."

Renascor is currently undertaking a Definitive Feasibility Study on Siviour, with upcoming work programs expected to include reserve definition drilling, variability and other metallurgical testing and detailed engineering.
