

29 July 2022

## **Quarterly Activities Report**

## for the period ended 30 June 2022

### **Significant Events**

- Drill assays at Renascor's Siviour Graphite Deposit in South Australia confirmed intersections within the project area that are amongst the thickest and highest grade to date, with results including:
  - **45 metres at 9.4%** Total Graphitic Carbon (**TGC**) from 23 metres **and 10 metres at 6.6%** TGC from 8 metres (SIVRC264),
  - o 25 metres at 13.7% TGC from 17 metres (SIVRC266),
  - 20 metres at 7.5% TGC from 7 metres (SIVRC267),
  - o 28 metres at 8.2% TGC from 82 metres (SIVRC248),
  - 25 metres at 8.4% TGC from 77 metres, including 18 metres at 10.0% TGC from 84 metres (SIVRC239), and
  - **31 metres at 7.0%** TGC from 79 metres (SIVRC247).
- These near-surface, thick and high-grade intercepts include assays from areas to the immediate west of the existing pit design and Siviour Inferred Resource, suggesting strong potential to both improve the mine schedule and increase the scale and confidence level of the Siviour Resource.
- Renascor entered into an access and option agreement that will permit it to explore in, and potentially purchase the land over, an area that includes the north-western extension of the Siviour Inferred Resource and other areas immediately along-strike of the existing Mineral Resource.
- Renascor considers the north-western extension area to offer similar potential for thick, highgrade graphite and an opportunity to further extend the current pit design in future staged expansions to Siviour's production capacity.
- Renascor is progressing work on an updated, optimised BAM Study that is assessing an increase in Stage 1 PSG production capacity, as well as additional staged expansions of PSG operations in order to meet projected demand. Studies to date have considered an initial Stage 1 production capacity of 28,000tpa PSG.
- Renascor's cash position as of 30 June 2022 was approximately \$74 million.

**Renascor Resources Limited** ABN 90 135 531 341 **Head office:** 36 North Terrace Kent Town SA 5067 Phone: + 61 8 8363 6989 Email: info@renascor.com.au www.renascor.com.au

### Siviour Battery Anode Material Project

#### **Drilling Program**

During the recently completed quarter, Renascor announced assay results from drilling at its 100%owned Siviour Project in South Australia. The assays confirmed intersections within the project area that are amongst the thickest and highest grade to date.

#### Discussion

Renascor is currently undertaking an updated, optimised Battery Anode Materials Study<sup>1</sup> (**BAM Study**), assessing its planned vertically integrated mine and advanced manufacturing operation in South Australia.

The optimised BAM Study is assessing an increase to the previously planned Purified Spherical Graphite (**PSG**) production capacity of 28,000tpa, as well as additional staged expansions to meet projected demand.

In support of this objective, Renascor completed a 2,873 metre (38 hole) reverse circulation drill program at Siviour, with a primary aim of increasing the confidence and scale of the Siviour Resource.

The drill results confirmed several thick intersections of high-grade graphite within the eastern- and western-most portions of the current pit design and Inferred Resource zones, with further thick, high-grade intersections extending to the west of the current pit design and Inferred Resource. See Figure 1.

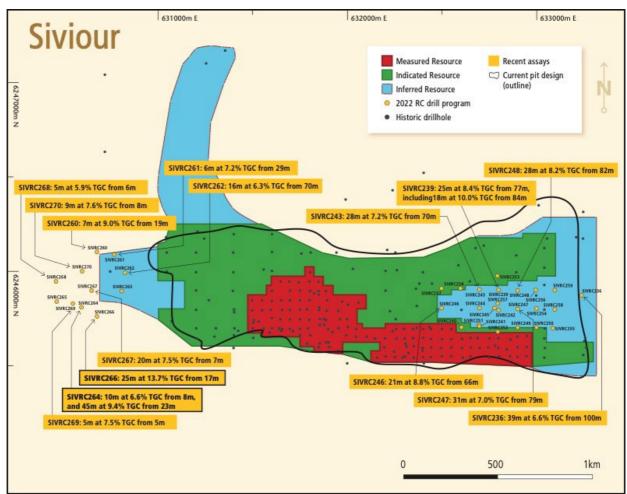

Figure 1. Siviour, showing drill assays and the location of the Inferred Resource zones targeted in the recent drill program

Assays from the recent drilling include some of the thickest and highest grade intersections to date within the project area, with results including:

- **45 metres at 9.4%** Total Graphitic Carbon (**TGC**) from 23 metres **and 10 metres at 6.6%** TGC from 8 metres (SIVRC264),
- 25 metres at 13.7% TGC from 17 metres (SIVRC266),
- 20 metres at 7.5% TGC from 7 metres (SIVRC267),
- 28 metres at 8.2% TGC from 82 metres (SIVRC248),
- **25 metres at 8.4%** TGC from 77 metres, including **18 metres at 10.0%** TGC from 84 metres (SIVRC239),
- 31 metres at 7.0% TGC from 79 metres (SIVRC247),
- 39 meters at 6.6% TGC from 100 metres (SIVRC236),
- 21 metres at 8.8% TGC from 66 metres (SIVRC246), and
- 28 metres at 7.2% TGC from 70 metres (SIVRC243).

Complete details of drill results are included in Renascor's ASX announcements dated 16 June 2022 and 6 July 2022.

The drilling results have confirmed the continuity of high-grade graphite within the western and eastern Inferred Resource zones (see Figure 1) and continuing along-strike outside the western Inferred Resource zone into areas that are not included in the current Mineral Resource Estimate.

The most significant assay results from the recent drill program include some of the thickest and highest grade intersections to date in the project area to date<sup>2</sup>. These results are located to the west of the western-most portion of the current pit design, suggesting potential to extend the pit in a revised pit design and mining schedule as part of Renascor's optimised BAM Study, with the potential to reduce mining costs and increase the volume of graphitic ore mined.

The drill results also suggest the potential to increase the Siviour Mineral Resource Estimate, as several significant graphitic intersections occur in areas outside the current Resource zone. This includes several significant assay results to the immediate west of the western-most portion of the Inferred Resource (e.g., holes SIVRC264 and SIVRC266. See Figure 2 (next page).

The drill results also suggest further potential to extend the Siviour Resource into areas that have not been identified as high conductivity zones from previous electro-magnetic (**EM**) surveys. In Renascor's previous drilling, the conductivity boundaries were considered as representing the extent of mineralisation. However, in this most recent drilling, several of the most significant intercepts are located on the margin of EM conductivity zones. See Figure 2 (next page).

Accordingly, in addition to extending into areas that present as high conductivity zones from EM surveys, there is additional potential to extend the Siviour Resource into areas outside these zones.

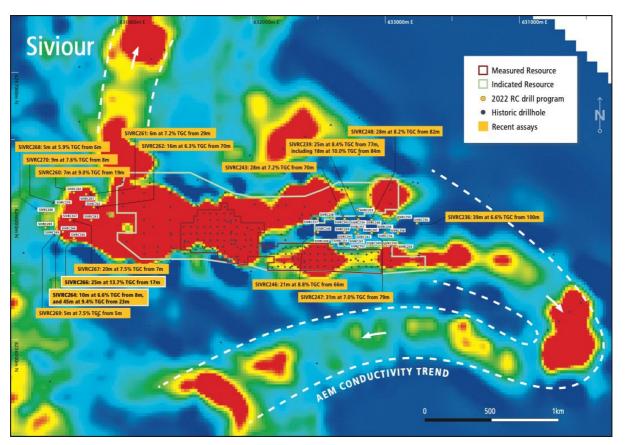

Figure 2. Drill results and resource outlines over airborne EM conductivity image showing interpreted trends.

#### Next steps

The results from the recent drill program will be used to prepare a revised mining schedule to be incorporated in the updated BAM Study.

The results will also permit the calculation of revised Mineral Resource Estimate expected to be completed later this quarter.

#### **Expansion of Project Area**

On 12 July 2022, Renascor announced an access and option agreement that will permit it to explore in, and potentially purchase the land over, an area that includes the north-western extension of the Siviour Inferred Resource and other areas immediately along-strike of the existing Mineral Resource.

Renascor considers the north-western extension area to offer similar potential for thick, high-grade graphite and an opportunity to further extend the current pit design in future staged expansions to Siviour's production capacity.

#### Discussion

Based on airborne EM conductivity data and historical drill information, Renascor considers the area to the immediate north of the western portion of the Siviour Mineral Resource to offer potential for thick, high-grade graphite and an opportunity to further extend the current pit design in future staged expansions to Siviour's production capacity beyond production levels being considered in Renascor's optimised BAM Study.

As shown in Figure 3, this north-western zone includes portions of the Siviour Inferred Resource where previous drilling intersected significant graphite intersections, including: 36 metres at 8.5% TGC from 34 metres (SIVRC005) and 32 metres at 5.3% TGC from 27 metres (SIVRC006)<sup>3</sup>.

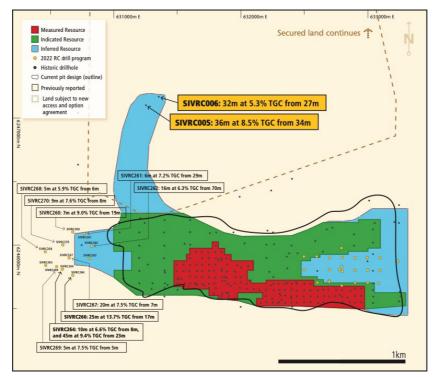

Figure 3. Siviour, showing the location of the Mineral Resource zones and results from recent drilling to the west of Inferred Resource in relation to land subject to new access and option agreement

Renascor previously conducted an airborne EM survey over the area north of the Siviour Mineral Resource in the area subject to the new access and option agreement, identifying an extensive conductive trend extending through the north-western portion of this area<sup>4</sup>.

The conductive trend includes a portion of the Siviour Inferred Resource, as well as a northward extension of the conductivity anomaly for an additional two kilometres along-strike. See Figure 4 (next page). Previous drilling in the project area has shown a strong correlation between areas of high conductivity and graphite mineralisation, suggesting strong potential for additional graphite along this conductive trend.

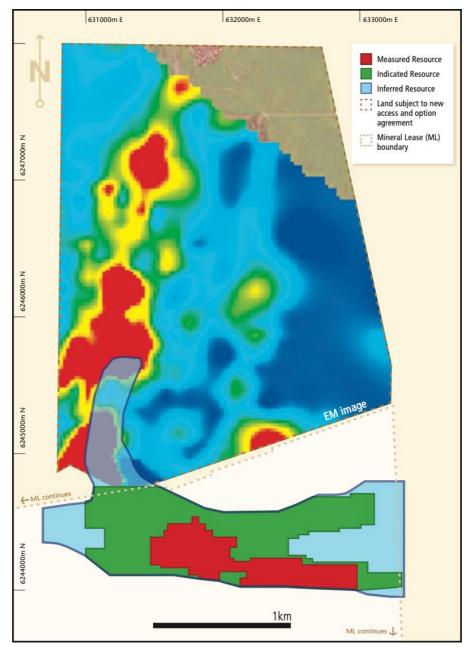

Figure 4. Siviour Project area, showing existing Mineral Resource and portion of airborne EM image over land subject to new access and option agreement

The existing Siviour Mineral Lease (ML 6495) includes the bulk of the Siviour Mineral Resource and the proposed pit design for the BAM Study.

The access and option agreement concerns the area to the north of the Mineral Lease and was made with Cambourn Pty Ltd, the owner of the freehold title to land in this area. Renascor already has the rights to explore for minerals in this area pursuant to Exploration Lease 6469<sup>5</sup>.

The access and option agreement ensures that Renascor will continue to enjoy access rights to this area for drilling and other programs Renascor is planning to undertake in support of future expansions to the Siviour Mineral Resource and the Siviour Battery Anode Material Project. The agreement also grants Renascor a three-year option to purchase the land following an independent appraisal<sup>6</sup>.

#### Next steps

Pending drill availability and final regulatory approvals, Renascor expects to commence drilling in the current quarter.

#### **Optimised BAM Study**

Work is progressing on an updated, optimised BAM Study<sup>7</sup> assessing the viability of Renascor's planned vertically integrated mine and advanced manufacturing operation in South Australia, with GR Engineering Services (ASX: GNG) acting as study manager and engineering designer, with Wave International providing Renascor with on-going support.

The optimised BAM Study is assessing an increase to the previously planned PSG production capacity of 28,000tpa, as well as additional staged expansions to meet projected demand.

The optimised BAM Study includes an update to the Siviour Graphite Concentrate Definitive Feasibility Study completed in November 2019 (the **Siviour DFS**)<sup>8</sup> and incorporates improvements to the Graphite Concentrate flotation circuit from subsequent mineral process test work, including:

- Locked cycle flotation tests that achieved graphite recovery of up to 94.5%<sup>9</sup>, as compared to 91.0% in the Siviour DFS<sup>10</sup>; and
- Pilot trials conducted at an independent commercial graphite facility that achieved graphite purities of up to 97.5% total carbon with graphite recovery of 93.2%<sup>11</sup>. This compares favourably to the Siviour DFS, which adopted average purities of approximately 94% total graphitic carbon<sup>12</sup>.

The optimised BAM Study also includes an update to Renascor's previous downstream studies (including the Spherical Prefeasibility Study completed in February 2019<sup>13</sup> and the 2020 BAM Study<sup>14</sup>) and incorporates subsequent improvements made to both the downstream milling and purification circuits. These improvements include:

- Commercial-scale downstream milling trials that achieved spherical graphite yields from in excess of 65% (versus the 50% yield adopted in the previous BAM Study)<sup>15</sup>; and
- Locked cycle purification trials undertaken by leading German independent battery mineral consultancy group Dorfner ANZAPLAN that confirmed that the ability to meet or exceed lithium-ion battery anode purity specifications, with results of up to 99.99% Carbon, with no impurities detected above acceptable anode customer specifications<sup>16</sup>.

#### **Offtake and Product Qualification**

Critical minerals for a secure future

Negotiation of binding PSG offtake agreements for Renascor's existing offtakers is progressing. Following deliveries of large-scale PSG samples produced from Renascor's recent pilot production campaign<sup>17</sup>, Renascor is in active discussion on PSG price and other material contract terms.

Renascor continues to have discussions with other leading anode and battery manufacturers concerning potential PSG offtake. Renascor has provided PSG samples to support customer qualification and commenced offtake discussions with these parties concerning potential offtake from the initial or subsequent stages of production.

#### Regulatory

In September 2021, Renascor lodged a Program for Environment Protection and Rehabilitation (**PEPR**) for the proposed Siviour Graphite Mine<sup>18</sup>. Renascor's PEPR seeks approval for a processing capacity of up to 1.65 million tonnes per annum, which would permit Renascor to produce up to 150,000 tonnes of Graphite Concentrates per year<sup>19</sup>.

The PEPR, which must be approved by the South Australian Department for Energy and Mining (**DEM**) before mining operations may commence, is the second step in the Government's two-stage assessment and approval process and follows the grant of the Siviour Mineral Lease in 2019<sup>20</sup>.

Following DEM's initial review and feedback regarding the PEPR, Renascor has finalised responses to all queries for DEM's final approval.

#### **Corporate Events**

#### Placement and Share Purchase Plan

During the recently completed quarter, Renascor raised A\$65 million (before costs) through a single tranche placement to institutional, sophisticated and professional (**Placement**) and \$279,000 through a share purchase plan (**SPP**).

A total of approximately 242 million ordinary shares at an issue price of A\$0.27 per share were issued under the Placement and SPP.

Funds raised under the Placement and SPP will primarily be used to expand and accelerate the Siviour Project, with proceeds allocated as follows:

Use <sup>1</sup>	Amount (A\$m)
Front-end engineering and detailed design (including expansion of Stage 1)	15
Long lead-time procurement and acquisitions	18
Reserve and Resource expansion	5
Expanded pre-production pilot	5
Early project works	15
Working capital	7
Total	65

1. Before offer costs.

#### **Cash position**

Renascor's cash position as of 30 June 2022 was approximately \$74 million.

#### Other

During the recently completed quarter, Renascor received A\$72,000 in relation to the exercise of options (RNUOB).

#### Notes in relation to Appendix 5B

The Company had exploration and evaluation costs of A\$6,000 and development asset costs of A\$1,480,000 during the quarter relating principally to the Siviour project as detailed above.

Payments to related parties and their associates during the recently completed quarter and outlined in Section 6 of Appendix 5B to this quarterly activities report were A\$376,000. These payments are related to salaries, superannuation and service and consultancy fees paid to directors and director-related entities during the quarter.

#### **Competent Person's Statements**

#### **Exploration Results**

The results reported herein, insofar as they relate to exploration activities and exploration results, are based on information provided to and reviewed by Mr G.W. McConachy (Fellow of the Australasian Institute of Mining and Metallurgy) who is a director of the Company. Mr McConachy has sufficient experience relevant to the style of mineralisation and type of deposits being considered to qualify as a Competent Person as defined by the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the JORC Code, 2012 Edition). Mr McConachy consents to the inclusion in the report of the matters based on the reviewed information in the form and context in which it appears.

This report may contain forward-looking statements. Any forward-looking statements reflect management's current beliefs based on information currently available to management and are based on what management believes to be reasonable assumptions. It should be noted that a number of factors could cause actual results, or expectations to differ materially from the results expressed or implied in the forward-looking statements.

Renascor confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. Renascor confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

This ASX announcement has been approved by Renascor's Board of Directors and authorised for release by Renascor's Managing Director David Christensen.

<sup>18</sup> See Renascor ASX announcement dated 27 September 2021.

<sup>19</sup> The 1.65 million tonne per annum approval sought pursuant to the PEPR relates to the volume of ore processed from the proposed Siviour mine through the adjacent processing plant. Pursuant to Renascor's proposed mining plan, this would result in up to 150,000 tonnes per annum of Graphite Concentrate production at full capacity. See Renascor ASX announcement dated 11 November 2019, page 40. Renascor has previously announced plans for a staged start-up at Siviour, starting with an ore processing capacity of 825,000 tonnes per annum and Graphite Concentrate production of up to 78,000 tonnes per annum in the first of a two-stage expansion to 1.65 million tonnes per annum of processing capacity. See Renascor ASX announcement dated 11 November 2019. During this first stage, 60,000 tonnes per annum of Graphite Concentrate would be used as raw material feedstock for Renascor's planned downstream battery anode material manufacturing operation to produce approximately 28,000 tonnes of Purified Spherical Graphite per annum. See Renascor ASX announcement dated 1 July 2021. As a result of increasing interest in Siviour Purified Spherical Graphite from existing and potential offtake partners, Renascor is currently evaluating an expansion to the initial, Stage One production of Purified Spherical Graphite and an additional Stage Two production capacity of Purified Spherical Graphite. 	Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.		
8.8	If item	8.7 is less than 2 quarters, please provide answers to the follow	wing questions:
	8.8.1	Does the entity expect that it will continue to have the current cash flows for the time being and, if not, why not?	level of net operating
	Answe	or: N/A	
	8.8.2	Has the entity taken any steps, or does it propose to take any cash to fund its operations and, if so, what are those steps ar believe that they will be successful?	• •
Answer: N/A			
	L		

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer: N/A

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

### **Compliance statement**

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: 29 July 2022

#### Authorised by: The Board of Renascor Resources Ltd

#### Notes

- This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
- 2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
- 3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
- 4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
- 5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's Corporate Governance Principles and Recommendations, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
